## VENTILATION LOUVRES

FZ, AFZV, AFZM, RZ, ARZ, PZ, ZP

## TABLE OF CONTENTS

Ventilation louvre FZ and AFZV.....	241
Ventilation louvre AFZM and RZ.....	242
Ventilation louvre RZO and ARZ.....	243
Ventilation louvre PZ.....	244
Ventilation louvre ZP.....	245
Selection diagrams.....	246
Ordering key.....	247

Dimension  $B > 1885 \text{ mm}$  or  $H > 1800 \text{ mm}$

$$B=2B_1 + 90; H=2H_1 + 90$$

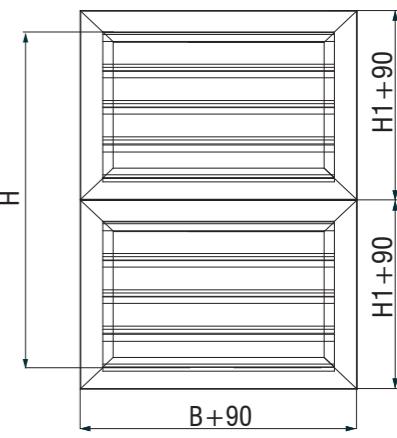

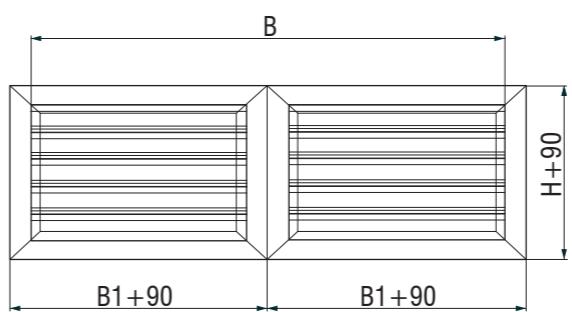

Example :  
 $B = 1785 \text{ mm}$   
 $H = 3400 \text{ mm}$

$$H = 2 H_1 + 90 \\ H_1 = (H - 90)/2 = (3400 - 90)/2 = 1655$$

## Definition of symbols:

$V [\text{m}^3/\text{h}]$	- Air flow
$V_n [\text{m}^3/\text{h}]$	- Nominal air flow
$V_{uk} [\text{m}^3/\text{h}]$	- Total air volume in motion
$h [\text{m}]$	- Distance from the ceiling to the occupied zone
$H [\text{m}]$	- Room height
$A, B [\text{m}]$	- Distance between diffusers
$x [\text{m}]$	- Distance from wall
$L [\text{m}]$	- Throw distance ( $x+h$ )
$A_{\text{ef}} [\text{m}^2]$	- Effective discharge area
$V_{\text{ef}} [\text{m}/\text{s}]$	- Effective jet velocity
$V_L [\text{m}/\text{s}]$	- Average core velocity at distance $L$ (m) from a diffuser
$V_{L\text{max}} [\text{m}/\text{s}]$	- Maximum core velocity at distance $L$ (m) from a diffuser

$v_h [\text{m}/\text{s}]$	- Average core velocity at distance $h$ (m) from a diffuser
$\Delta p [\text{Pa}]$	- Total pressure drop
$t_p [{}^\circ\text{C}]$	- Air temperature in a room
$t_z [{}^\circ\text{C}]$	- Supply air temperature
$t_m [{}^\circ\text{C}]$	- Core air temperature
$\Delta t_z [{}^\circ\text{C}]$	- ( $t_z - t_p$ )
$\Delta t_m [{}^\circ\text{C}]$	- ( $t_m - t_p$ )
$i$	- Induction $V_{uk}/V$
$L_{WA} [\text{dB(A)}]$	- Sound power level

## FZ | AFZV

- FZ - made out of galvanized steel sheet
- AFZV - made out of galvanized steel sheet
- Galvanized steel mesh on the back side
- Fixing with screws

## Options:

- Installation subframe
- RAL...

\* Holes for screws are not drilled

## Standard dimensions FZ, AFZV\*

B	385 - 1885 mm, in increments 200mm
H	300 - 1800 mm, in increments 150mm

\*all combinations B x H are possible

Free cross-section approx. 60 % of  $B \times H$

**AFZM**

- Made out of anodized aluminium profiles
- Galvanized steel mesh on the back side
- Fixing with screws

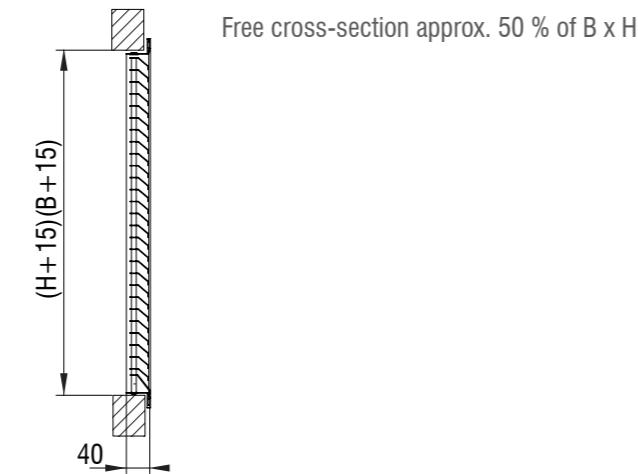

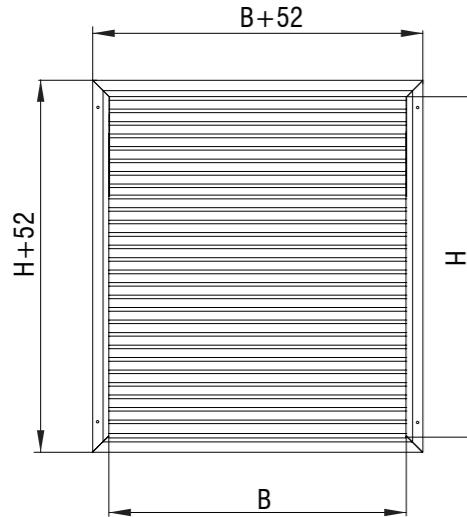

Options:

- Installation subframe (UR)
- RAL...

**Standard dimensions AFZM\***

B	297 - 1197 mm, in increments 100mm
H	197 - 697 mm, in increments 100mm

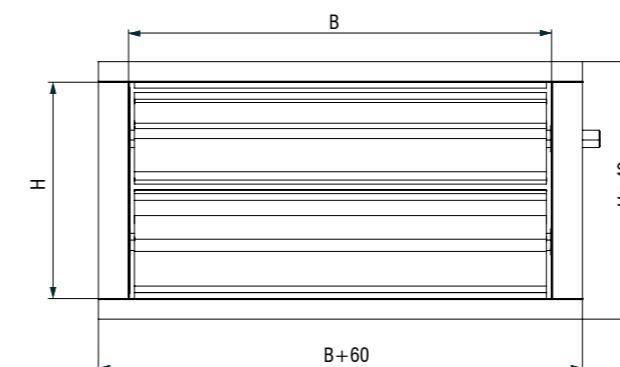

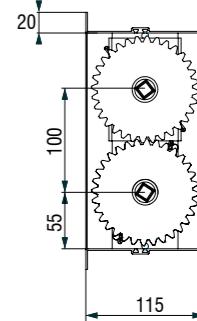

\*all combinations B x H are possible

**ARZ**

- Made out of anodized aluminium profiles, gears and bearings made of ABS.
- Opposed damper blade operation
- Blade tip seals, made of specially profiled rubber provides excellent sealing characteristics
- $\Delta p_{max} = 600 \text{ Pa}$ ;  $t_{max} = 70^\circ\text{C}$

**Standard dimensions ARZ\***

B	400 - 2400 mm, in increments 200mm
H	210 - 1510 mm, in increments 100mm

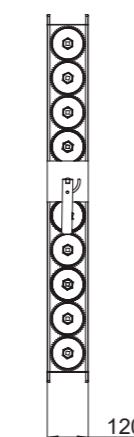

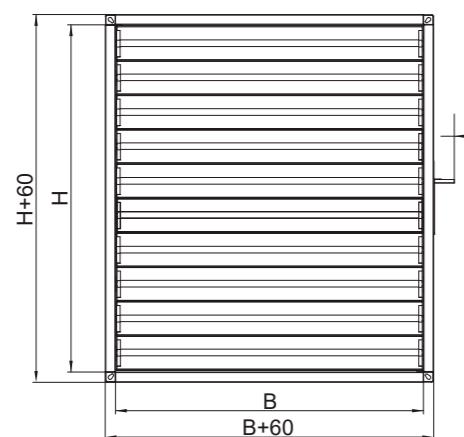

**ZRZ12 / RZ12**

- RZ - made out of galvanized steel sheet, gears and bearings made of ABS.
- Opposed damper blade operation
- $\Delta p_{max} = 1000 \text{ Pa}$ ;  $t_{max} = 70^\circ\text{C}$

**Standard dimensions RZ\***

B	200 - 1400 mm, in increments 100mm
H	215 - 1015 mm, in increments 100mm

\*all combinations B x H are possible

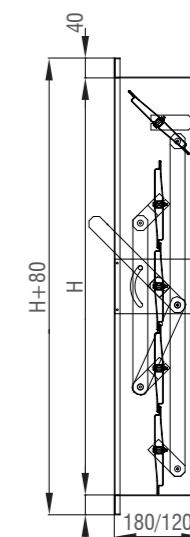

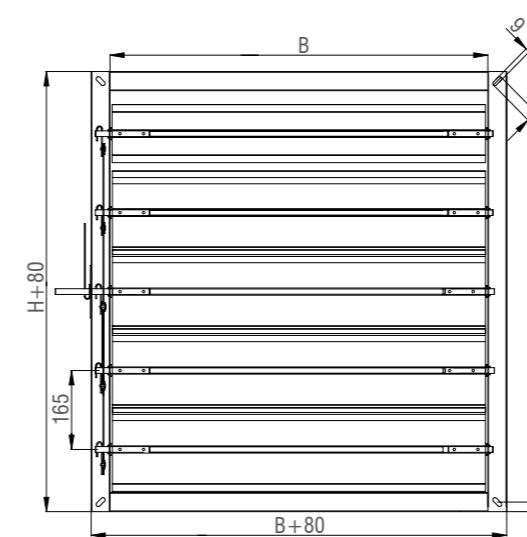

**RZ0**

- Reinforced regulation louvre
- Made out of steel sheet profiles, reinforced damper blades out of steel profiles, brass bearings
- Frame width RZ012 - 120 mm  
RZ018 - 180 mm
- Counter-rotating damper blades

**Standard dimensions RZ\***

B	400 - 2000 mm, in increments 200mm
H	345 - 1995 mm, in increments 195mm

\*all combinations B x H are possible

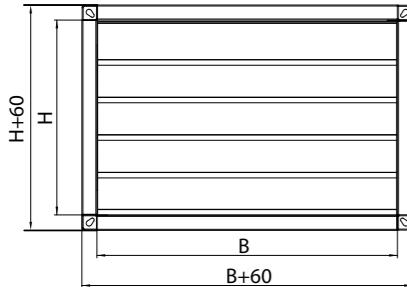

**PZ**

- Frame made of anodized aluminium profiles, blades made from anodized aluminium sheet.
- Duct version - frame made of galvanized steel sheet
- Wall or duct installation with screws

## Options

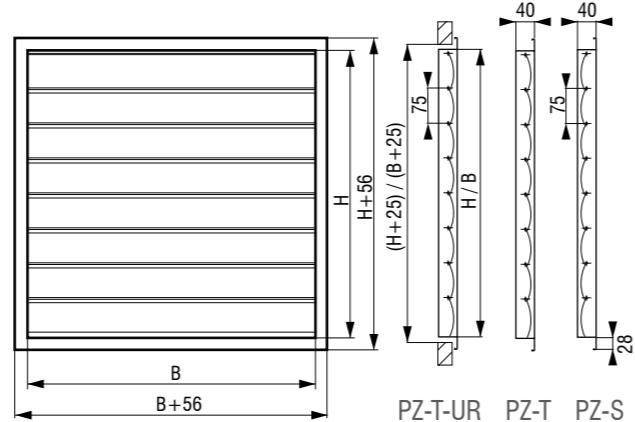

- Overpressure (Supply)
- Underpressure (Exhaust)
- Duct type
- Discharge with square-to-cylindrical transition section
- Installation subframe

PZ-K

Standard dimensions PZ-T, PZ-S, PZ-K*	
B	200 - 1600 mm, in increments 200mm
H	240 - 1590 mm, in increments 75mm

\*all combinations B x H are possible

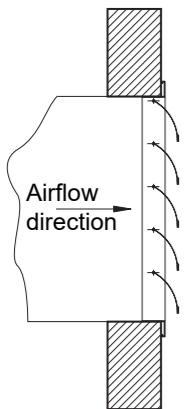

## Standard dimensions PZ-T/O\*

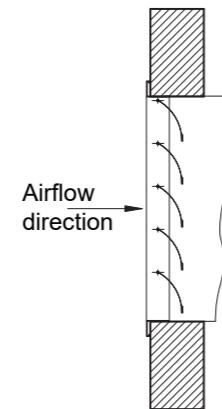

B	330 - 730 mm, in increments 50mm
ØD	300 - 700 mm, in increments 50mm

\*all combinations B x H are possible

## OVERPRESSURE

## UNDERPRESSURE

**ZP**

- Made of galvanized steel sheet
- Installed directly into the wall opening by anchor springs at the installation frame

## Application

- Separation of sand from air stream
- Correct mounting position of the sand-trap louvre is important
- Average efficiencies obtained by tests 80% particles 20 - 50 µm, or 50% particles 1 - 70 µm.
- 

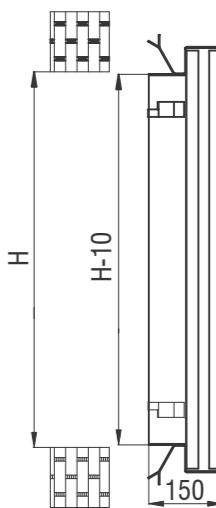

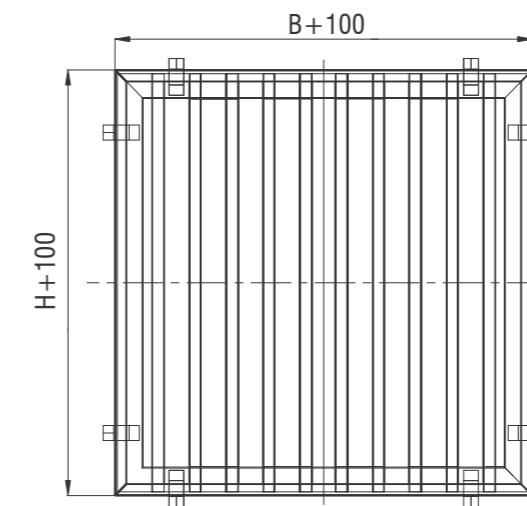

## Options

- RAL...

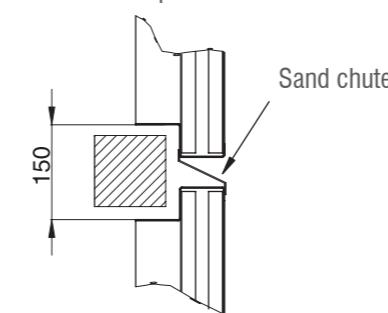

## Standard dimensions ZP\*

B	300 - 2250 mm, in increments 150mm
H	300 - 2250 mm, in increments 150mm

\*all combinations B x H are possible

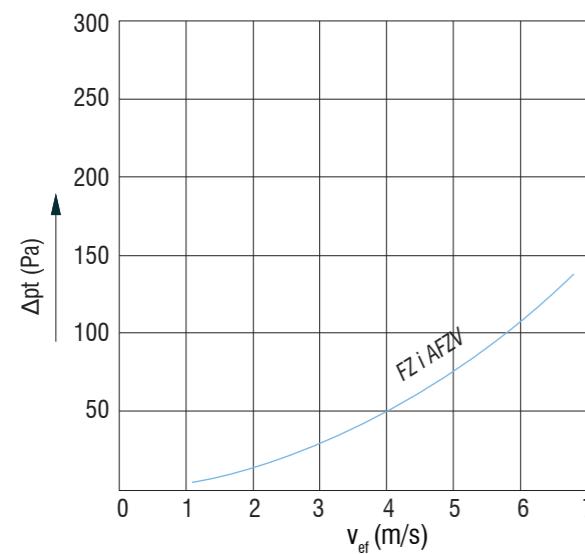

## Vertical connection of two sand trap louvres

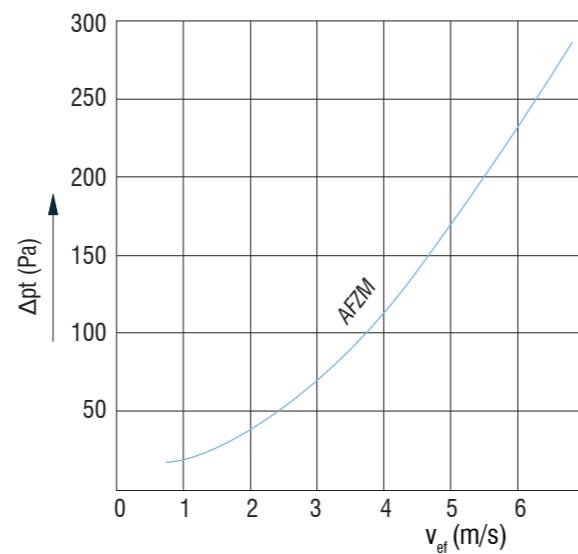

**SELECTION DIAGRAMS**

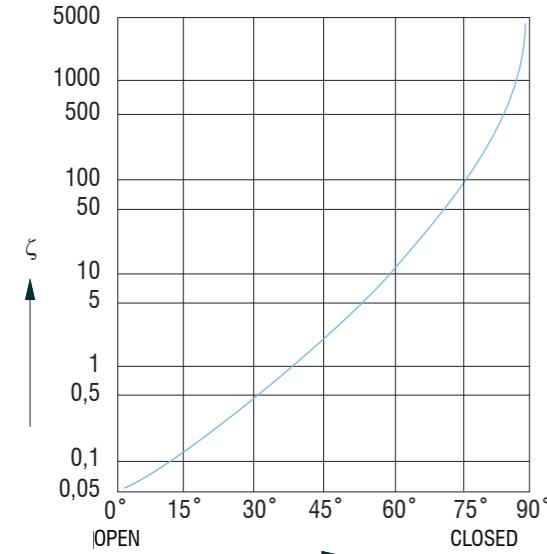

Pressure drop diagram - FZ

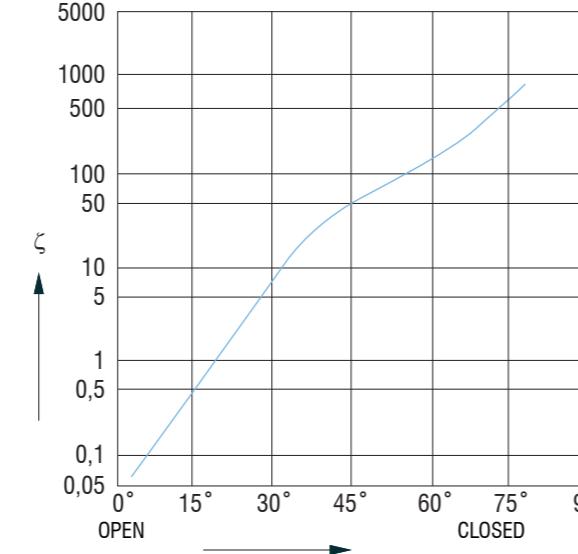

Pressure drop diagram - AFZM, AFZV

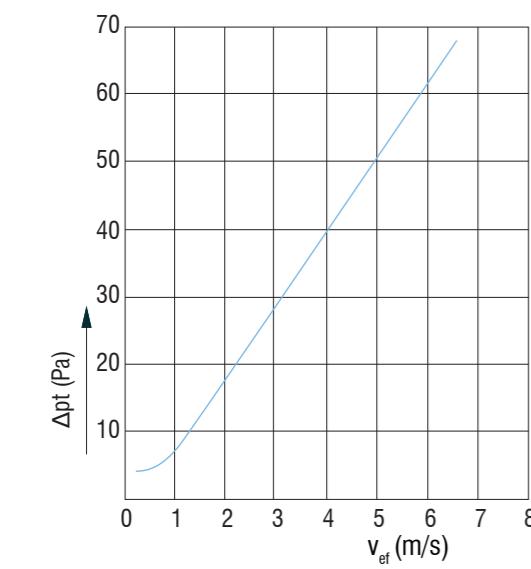

Flow resistance diagram - FZ

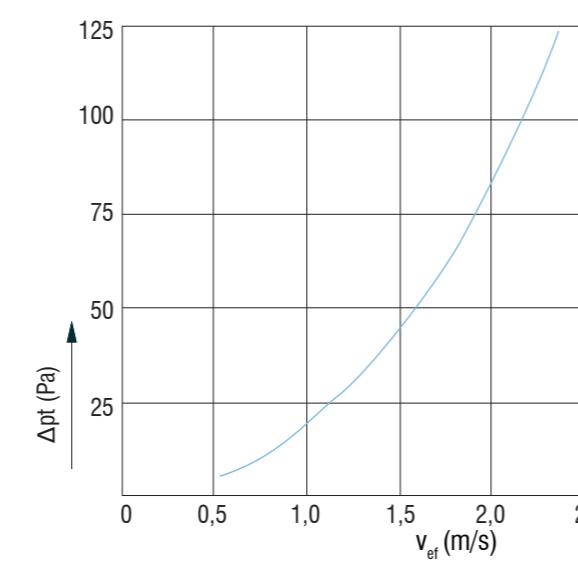

Flow resistance diagram - ARZ

Pressure drop diagram - PZ

Flow resistance diagram - ZP

**ORDERING KEY**

Louvre type

**AFZM - 1785X1500 - UR - M230 - OZ**

Dimensions

Installation subframe (UR, IS)

Drive (RZ, ARZ)

- R, manual
- M 24, motor actuator 24 V
- M 230, motor actuator 230 V

Regulation (RZ, ARZ)

- OZ (two positions)
- K (continuous)
- F (return spring)

\* Screws are not delivered
